

V3.0 ECOSYSTEM RELEASE

The Atomic Web Framework.

One unified ecosystem. Zero magic. Four specialized
pillars for the professional web.

QueryFast

The DOM Cursor. High-speed manipulation and reactive state.

RootingFast

The Spine. Minimal routing and explicit shared scope management.

BaseFast

The Data. Professional file-based storage using OPFS.

WebFast FX

The Soul. Emotional animations and professional UI helpers.

QueryFast

The heart of WebFast. Everything revolves around the **DOM Cursor**.

Basic Usage

```
app.el("h1").text("Hello WebFast"); // Create and mutate
```

METHOD	DESCRIPTION
<code>Q(s)</code>	Universal selector. Returns a QCollection cursor.
<code>.el(a, ... args)</code>	Unified creator for DOM and Components.
<code>.text(v)</code>	Atomic text update.
<code>.add / .rm / .set</code>	Identity manipulation via selectors.
<code>Q.state(v)</code>	The Nerve. Reactive state primitive.

RootingFast

The minimal backbone. Handles routing without hydration magic.

```
useRouter(
  use({
    "/user/:id": UserPage
  });

  usePage(ctx, scp) {
    // ...
    return () => { /* Optional Cleanup */ };
  }
}
```

BaseFast

Professional data layer using the **Origin Private File System (OPFS)**.

```

    // Save the user to the database
    await db.save([ { id: 1, name: "Gentarou" } ]);

    // Find the user from the database
    const user = await fast.from(db.all())
    // Check if the user is the one we want
    if (user.id === 1)
    .exec();

```

WebFast FX

Modular extensions for animations and UI patterns.

```

// Import the FX module
import { FX } from "webfast-fx";

// Use the FX module
await FX.motion.slideIn(Q(".header"), { y: 20 });

// Use the FX module
// Create a form
const f = FX.form({ id: "form" });
f.bind("email").on(Q("input"));

```
